

DIGT 2107 – Fall 2024

Lab1 – Git, EGit, Github

Due Date: October 2, 2025 – During Lab session

Your lab assignment is graded during the block week scheduled lab sessions.

1 Lab tasks

In this lab, you will need to show your understanding of Git, EGit, and GitHub.

1.1 Preparations

1. Create a GitHub account and use your student ID as your account name (or somehow related to your student ID). You can use your existing GitHub account.
2. Create a remote repository named **2107Lab1**.
 - (a) **P1:** Provide a screenshot of your repository list. The screenshot must show your GitHub username.

1.2 Tasks using command line

The following tasks must be completed through the command line:

1. Clone your remote repository to your local machine. Provide screenshots showing
 - (a) **Task1.1a:** the command you used to clone your remote repository (it's ok if the repository is empty).
 - (b) **Task1.1b:** the output of running `git status`, it should show that you are on branch **main**.
2. Create a file named **2107Lab1-command.txt** under the repository you just cloned, and provide a screenshot showing the **command and output** you used for **each** of the following tasks
 - (a) **Task1.2a:** add the file so that Git can keep track of it.
 - (b) **Task1.2b:** commit this change with the message "**create 2107Lab1-command.txt**".
 - (c) **Task1.2c:** push the change to your remote repository.
3. **Task1.3:** Go back to your GitHub page, take a screenshot of your **2107Lab1** repository, it should show the file (**2107Lab1-command.txt**) you just created, and the commit message.
4. **Task1.4:** Create a **remote** branch through command line, named **lab1-command**, show the result of running `git branch -a` (there should be a remote branch namely **lab1-command**).
5. **Task1.5:** Modify the file **2107Lab1-command.txt** so that it contains the content "Add line using command line.", and show the result of running `cat 2107Lab1-command.txt`.

6. **Task1.6:** Commit and push the change of file 2107Lab1-command.txt to the **remote** branch **lab1-command** (not main!). Provide screenshot(s) showing the command you use and their output.
7. **Task1.7:** Rename the current branch name **lab1-command** to a new name **new-branch-rename**, show the screenshot(s) for the command you use and its output.

1.3 Tasks using EGit

The following tasks must be finished through EGit:

1. **Task2.1:** Clone your remote repository using EGit. Provide a screenshot of your Eclipse's *Project Explorer*. It should show your repository with a line of text in orange indicating your current branch (which normally should be **main**).
2. Create a file named **2107Lab1-egit.txt** under the repository you just cloned, commit and push this change to your remote repository.
 - (a) **Task2.2a:** Provide a screenshot showing how you make the commit (The *Git Staging* window),
 - (b) **Task2.2b:** Provide a screenshot of your push result in Eclipse.
3. **Task2.3:** Go back to your GitHub page, take a screenshot of your 2107Lab1 repository, it should show the file (**2107Lab1-egit.txt**) you just created, and the commit message.
4. **Task2.4:** Delete the **remote** branch that you created in section 1.2.4 with EGit, named **lab1-command**, provide a screenshot of the **Result** window in Eclipse.
5. **Task2.5:** Modify the file **2107Lab1-egit.txt** so that it contains the content "Add line using EGit.", commit and push the change to the remote branch **main**. Provide a screenshot of your *Push Results* window in Eclipse.

1.4 Submission

Show your resulting files to the TA for grading.

1.5 Marking rubric

Mark	Tasks
2%	P1
4%	Task1.1a
4%	Task1.1b
4%	Task1.2a
4%	Task1.2b
4%	Task1.2c
6%	Task1.3
6%	Task1.4
6%	Task1.5
5%	Task1.6
5%	Task1.7
10%	Task2.1
5%	Task2.2a
